

Clock movement 192 / 192 †

for indoor and outdoor clocks up to Ø 80 cm. Radio controlled or synchronized by RS 232 / RS 422 or equipped with accurate quartz.

Modular, state-of-the-art movement for indoor and outdoor clocks (with or without illumination) up to 80 cm, for hour and minute display. Execution 192 for non-transparent dials, 192 † for transparent dials.

Choice of three operation modes:

Model BU 192 / 192 †

Synchronized by means of an RS 232 / RS 422 serial interface

type IF 494.

Model FU 192 / 192 †

radio controlled by means of an internal or external time signal receiver DCF 77 or MSF 60.

Model QU 192 / 192 †

controlled by means of a precision quartz, with programmable day-light saving time switch-over.

Concept and Technology

Basic movement BU 192/192 t

Movement in microprocessor technology, push button for time setting resp. 12.00 position. Choice of battery (built in battery compartment) or external mains power supply. By means of an external push button (10 m cable) the internal button can be remote controlled.

The basic movement can be controlled by the RS 232 / RS 422 serial interface type IF 494. By means of cascade linking, up to three slave movements BU 192/t can be connected.

Furthermore, as a slave movement the BU 192/t can also be controlled by a radio movement FU 192/t or a quartz movement QU 192/t (cascading).

BU 192t

FU 192

FU 192t und BU 192t in cascade linking

Radio movement FU 192/192 t

Combined with a time signal receiver, the basic model BU 192/t becomes the model FU 192/t.

By means of cascade linking the FU 192/t can control up to three slave movements BU 192/t, i.e. for 2-, 3- or 4-sided clocks.

When working with a time signal receiver DCF 77, the synchronization for BU 192/t refers to CET (Central European Time). By means of a solder bridge the movement can also operate in the time zones CET+1 or CET-1.

Radio time signal receiver

Models AD 192/192.5 for DCF 77-time signal.

Models AM 192/192.5 for MSF 60 (England)-time signal.

The radio receivers AD 192 and AM 192 are designed for the adaption to BU movements for in- and outdoor use. Indoor it can be extended by use of the cable CAB 192 up to 8 m.

The radio receivers AD 192.5 and AM 192.5 with 5 m cable are designed for the external connection to an outdoor clock. Degree of protection IP 54.

Time synchronization

After startup a red LED is flashing once a second until time reception is completed.

Quartz movement QU 192/192 t

The movement is equipped with a temperature compensated quartz with high accuracy. It can be used anywhere indoors or outdoors, where no other synchronization is available. The exterior dimensions are the same as for model BU 192/t.

Particular advantages:

- For dials up to Ø 80 cm.
- Daylight saving time programming.
- Exact time setting through serial interface by means of interface IF 494.
- Exact time setting by means of push button (1 minute, 1 hour or 11 hours steps).
- Control of up to 3 slave movements BU 192/t in cascade linking.

QU 192t

Dimensions:

Accessories

Power supply

For all the models the following power supplies are available:

Long life lithium battery LIT/3.6V

Life span of the battery about 6-7 years. For clock with two faces or more, one battery per movement is required.

Power supply unit 230 V, 50 Hz / 2 x 3,7 VDC

With buffered storage battery for running reserve during mains breakdown. With one power supply unit two movements can be supplied, i.e. for doublefaced clocks. Running reserve at full charge:

1 movement about 14 days,

2 movement about 7 days

Life span of storage battery:

Depending on conditions 2 – 3 years.

Extension cable CAB 192

For external indoor mounting of the time signal receivers AD 192/AM 192 from the movement FU 192/192/t.

Cable length 4 m. Extension with max. 2 x CAB 192 up to 8 m, incl. connector (SET).

Cascade cable COM 192

For connection of a slave movement BU 192/192 t to a controlling movement of the 192 range, cable length 1 m.

Interface IF 494

for the connection of a serial interface RS 232 or RS 422.

Functions:

- Time control of BU 192/192 t over a periodical time telegram.
- Unique time setting and pre-programming of the automatic daylight saving time change-over for QU 192/t.

The interface is mounted in the same housing as the time signal receiver and can be plugged into the movement. Interface connection to the movement by means of connector and connecting cable (12 cm).

Measure table for FU/BU/QU

	192	192t
Minute shaft A (Ø 4-0,02 mm)	18,9	34,0
Hour shaft B (Ø 6-0,02 mm)	11,9	27,0
Thread for central fixing C (M 12x1)	8,4	23,5
Distance sink tube D (mm)	—	8,0
Max. dial thickness (mm)	5,0	8,0
