

Software

Switch Editor Basic

With the basic Version of Switch Editor, switching programs for MOBATIME devices such as DTS 4801, DTS 4802 or ETC for example, can be defined with simple and familiar tools (similar to outlook calendar). For this purpose up to four switching channels with different weekly programs are allocated.

Typical application: small installations like schools or small companies with up to 4 relays

Advantages at a glance:

- The Switch Editor Basic allows to program 4 relays using 1 week program per relay
- With MOBANMS direct download possible to DTS 480x.masterclock. For ETC and CTC a special software is needed
- Free definable exceptions (e.g. for holidays)
- Switching commands with fixed on and off times or signals (1 - 90 sec) are supported
- Copy and Paste function
- Easy to edit the switching commands with Drag and Drop
- Comes with three languages: English, German, French

For advanced switching functions Switch-Editor 3 with the following features is available

- Up to 100 different week programs and up to 64 channels (relays) possible
- Up to 5 different priorities for operating phases, e.g. for seasonal phases, holiday phases, national bank holidays or other periods
- Direct download to DTS 480x.masterclock, ETC and CTC
- Upload function
